## TRANSLATION.

## LETTER OF CHRISTOPHER COLUMBUS,

 the great benefactor of the present age, concerning the newly discovered islands of India upon the Ganges, upon which enterprise be was despatched eight montbs since by the invincible Sovereigns of Spain, Ferdinand and Isabella; directed to Don Rafael Sanchez, Treasurer of their most Serene Higbnesses. Translated from the Spanisb into Latin by Leandro de Cosco, April 25, 1493, first year of the pontificate of Alexander VI.As I know you will take pleasure in hearing of the success of my undertaking, I have determined to send you an account of the occurrences of my voyage and discoveries. Thirty-three days after my departure from Cadiz I arrived in the sea of India, where I discovered many islands, inhabited by innumerable people. Of these I took posses-
sion in the name of our fortunate monarch, with public proclamation and colors flying, no one offering any resistance. I named the first of these islands San Salvador, thus bestowing upon it the name of our holy Saviour, under whose protection I made the discovery. The Indians call it Guanahanyn. I gave also a new name to the others, calling the second Santa Maria de la Concepcion, the third Fernandina, the fourth Isabella, the fifth Juana. In the same manner I named the rest. Arriving at the one last mentioned, I sailed along the coast toward the West, discovering so great an extent of land that I could not imagine it to be an island, but the continent of Cathay. I did not, however, discover upon the coast any large cities, all we saw being a few villages and farms, with the inhabitants of which we could not obtain any communication, they all flying at our approach. I continued my course, still expecting to meet with some town or city, but after having gone a great distance, and not meeting with any, and finding myself proceeding toward the North, which I was desirous to avoid on account of the cold, and, moreover, meeting with a contrary wind, I determined to return to the South, and, therefore, put
about and sailed back to a harbour which I had before observed.

At this place I sent two men into the country to see if the king or any cities were to be found. These returned in three days, having discovered a great number of towns, but all of them small, and without any government. In the meantime I had learned from certain Indians whom I had taken here that this country was an island. I returned along the coast to the east, a distance of three hundred and twenty-two miles, which brought me to the extremity of the island. Here I discovered to the East another island, fifty-four miles from Juana. I gave it the name of Espanola, and coasted along the island to the North as at Juana I had proceeded to the East, a distance of five hundred and sixty-four miles. All these islands are very fertile. That of Juana abounds in safe and capacious harbours, which surpass in excellence all I have ever seen elsewhere. It is watered by a great number of large and pleasant rivers, and contains many high mountains.

These islands are of a beautiful appearance, and present a great diversity of views. They may be traversed in any part, and are adorned with a
great variety of exceedingly lofty trees, which to appearance never lose their foliage, for I saw them as verdant and flourishing as they exist in Spain in the month of May, some covered with flowers, others loaded with fruit, according to their different species and their season of bearing, the whole offering a spectacle of great beauty. The nightingale and countless other birds were singing, although it was the month of November when I visited this delightful region. There are, in the island of Juana, six or eight sorts of palm trees, superior to those of our land in height and beauty, and this superiority is likewise observable in the other trees as well as in the herbs and fruits. Here are to be seen the most beautiful pine trees and the most extensive fields and pastures, a great variety of birds, several sorts of honey, and many kinds of metal, with the exception of iron. In the island named Espanola there are lofty and beautiful mountains, large cultivated tracts, woods, fertile fields, and everything adapted to the purposes of agriculture, the pasturage of cattle, and the erection of houses. The excellence of the harbours here, and the abundance of the streams which contribute to the salubrity of the climate,

## 5

exceed imagination. There is a considerable $\mathrm{di}_{1}$. ference between the trees, fruits, and fields of this island and those of Juana, but here are found divers sorts of precious drugs, gold, and metals. The inhabitants of both sexes, in Espanola, and all the other islands which I saw or heard of, go naked as they were born, all except a few females who wear at the waist a green leaf, a portion of cotton, or bit of silk, which they manufacture for this purpose.

As I before remarked, they possess no iron, and they neither use nor are acquainted with weapons, to the exercise of which indeed they are not at all adapted, not by reason of any corporal deficiency, as they are very well shaped, but on account of their great timidity. Instead of arms they have canes dried in the sun, to the largest ends of which they fix a piece of wood sharpened at the end; of these, however, they have not the courage to make much use. I have in many instances sent two or three of my men to their towns to communicate with the inhabitants, when the Indians would tumultuously rush out, and seeing our people drawing near, run away with such haste that the father would abandon
his child and the child his father. This timidity was not owing to any violence or injury we offered them, as I was in the practice of making presents of cloth and other things to all the natives whom I met, but arose from their natural mildness and want of courage. Notwithstanding this, as soon as they have thrown aside their fear, and consider themselves in safety, they are very ingenuous and honest, and display great liberality with whatever they possess.

They never refuse to give any thing away which is demanded of them, and will even themselves entreat an acceptance of their property. They exhibit a great friendship towards every one, and will give whatever they have for a trifle or nothing at all. I forbade my men to purchase any thing of them with such worthless articles as bits of earthenware, fragments of platters, broken glass, nails, and thongs of leather, although when they got possession of any such thing they valued it as highly as the most precious jewel in the world. In this manner of bartering, a sailor has acquired for a leather strap or piece of rope, gold to the amount of three sueldos. Others have obtained as much for a matter of still lower value. For
new Spanish coins they would give any thing asked of them, as an ounce and a half or two ounces of gold, or thirty or forty pounds of cotton. Thus they would trade away their cotton and gold like idiots, for broken hoops, platters and glass. I prohibited their traffic on account of its injustice, and made them many presents of useful things which I had carried with me, for the purpose of gaining their affection, in order that they may receive the faith of Jesus Christ, be well disposed towards us, and be inclined to submit to the King and Queen, our Princes, and all the Spaniards, and furthermore that they may furnish us with the commodities which abound among them and we are in want of.

They are not idolators, but believe that all power and goodness is in heaven, and that I had proceeded from that place with my ships and men; under this notion they received me at my first arrival as soon as they had banished their fear. They are not stupid and indolent, but acute and sagacious. Those of them who navigate the seas among those islands give singular accounts of what they have observed upon their voyages, but have never seen people who wear clothes, nor
any ships similar to ours. On my arrival I took by force from the first island a few of the Indians, in order that we might become acquainted with one another's language, and to gain a knowledge of what their country contained. These were of singular use to us, as we came to understand each other in a short time by the help of words and signs. I have them still with me, and they continue in the belief that we come from heaven. This information they published wherever we arrived, exclaiming in a loud voice, "Come! come! and see the celestial people." Upon this call, the natives would come thronging to us, after having banished the fear which seized them at first, men, women and children, old and young, crowding the roads and bringing us victuals and drink, with the utmost affection and reverence.

In every one of these islands there are a great number of canoes, each one made of a solid log, of a narrow shape, somewhat resembling our fustas, but swifter in the water; they are navigated solely by oars. They are of different sizes, the most of them containing seats for eighteen rowers. Throughout these islands there is no diversity in the appearance of the people, their manners or
language, all the inhabitants understanding one another; a very favorable circumstance, in my opinion, to the design which I have no doubt is entertained by our king, namely, to convert them to the holy Christian faith, to which as far as I can perceive they are well disposed. I have said that I sailed from W. to E. three hundred and twentytwo miles along the island of Juana; from the length of this course I am confident that this island is larger than England and Scotland together, for besides the extent which I coasted there are two other provinces to the West which I did not survey. One of these is named by the Indians Anam, and contains inhabitants with tails. These tracts extend to the distance of a hundred and eighty miles, as I have learnt from the Indians with me, who are well acquainted with them.

The island of Espanola is as large as that part of Spain which extends from Catalonia to Fontarabia, which I infer from the extent of that side of it which I sailed along, being five hundred and forty miles in length. I took possession of this fine island, as I had done of the others, in the name of our invincible king ; and fixed upon a spot for a large city here, as I judged it the most favorable
place. I called it Navidad, and ordered the construction of a fortress here, which is by this time finished. At this place I left a sufficient number of men, with all sorts of arms, and a sufficiency of provisions for above a year. I also left them a caravel and expert workmen, after having secured them the friendship of the king of this part of the country. The people are a friendly and amiable race, and the king took a pride in calling himself my brother. Even if their sentiments should change, and they should become hostile towards us, they will not be able to effect any injury to those who remain at the fortress, as they are destitute of weapons, go naked, and are very cowardly, so that those whom I have left there will be able to retain the whole island in subjection without any danger, if they adhere to the regulations with which 1 charged them.

Each of the natives, as far as I can understand, has one wife, with the exception of the King and Princes, who are permitted to have as many as twenty. The women appear to do more labour than the men. Whether there exists any such thing here as private property I have not been able to ascertain, as l have observed that an individual
has been set to distribute to the others, in particular, food and such things. I found no ferocious, sanguinary people in these parts, as some seem to have imagined the people here to be, but they are a very mild and friendly race. Their color is not black like that of the Ethiopians. Their hair is lank and hanging down. They do not inhabit those parts where the sun's rays are very powerful, as the heat is excessive here, the latitude being apparently twenty-six degrees. On the summits of the mountains the cold is great, but they do not suffer any incommodity from it, by being accustomed to the climate, and by the use of hot meats and drinks, which they consume very prodigally.

People of a monstrous description I saw none nor heard of any, except those of the island named Caris, which is the second on the course from Espanola to India; this island is inhabited by people who are regarded by their neighbors as exceedingly ferocious; they feed upon human flesh. These people have many sorts of canoes, with which they make incursions upon all the isles of India, robbing and plundering wherever they go. Their difference from the others consists in their wearing long hair like that of the women, and
in using bows and arrows of cane, these last constructed, as I have already related, by fixing a piece of sharpened wood at the larger end. On this account they are deemed very ferocious by the other Indians, and are much feared by them; I think, however, these men are precisely like the others. These are the natives who go to visit the females, who are the sole inhabitants, of the island of Matenin, which is the first on the route from Espanola to India. These women exercise none of the common occupations of their sex, but manage the bow and dart, as we are told of the ancients. They wear armour made of plates of copper, of which metal they have great abundance.

I am assured by the Indians that there is another island, larger than Espanola, whose inhabitants are without hair, and who possess a greater quantity of gold than the others. From this island, as well as the others. I haye taken some of the inhabitants to confirm the accounts which I give.

Finally, to sum up the whole, and state briefly the great profits of this voyage, I am enabled to promise the acquisition, by a trifling assistance from their Majesties, of any quantity of gold, drugs, cotton, and mastick, which last article is
found only in the island of Scio; also any quantity of aloe, and as many slaves for the service of the marine as their Majesties may stand in need of. The same may be said of rhubarb, and a great variety of other things, which, I have no doubt, will be discovered by those I have Ieft at the fort, as I did not stop long at any single place, unless obliged to do so by the weather, with the exception of the city of Navidad, where we made some stay to build the fort and provide the necessary securities for the place.

Although the discoveries actually accomplished appear great and surprising, yet I should have effected much more had I been furnished with a proper fleet. Nevertheless, the great success of this enterprise is not to be ascribed to my own merits, but to the holy Catholic faith and the piety of our Sovereigns, the Lord often granting to men what they never imagine themselves capable of effecting, as he is accustomed to hear the prayers of his servants and those who love his commandments, even in that which appears impossible; in this manner has it happened to me, who have succeeded in an undertaking never before accomplished by man. For although some persons

## I4

have written or spoken of the existence of these islands, they have all rested their assertions upon conjecture, no one having ever affirmed that he saw them, on which account their existence has been deemed fabulous.
And now ought the King, Queen, Princes, and all their dominions, as well as the whole of Christendom, to give thanks to our Saviour Jesus Christ, who has granted us such a victory and great success. Let processions be ordered, let solemn festivals be celebrated, let the temples be filled with boughs and flowers. Let Christ rejoice upon earth as he does in heaven, to witness the coming salvation of so many people heretofore given over to perdition. Let us rejoice for the exaltation of our faith, as well as for the augmentation of our temporal prosperity, in which not only Spain, but all Christendom shall participate. Such are the events which I have described to you with brevity. Adieu.

Christopher Columbus, Admiral of the Armada of the Ocean.
